## Learning outcomes:

1. Develop skills in using a systematic approach to detect and assess high prevalence mental health conditions.
2. Identify pharmacological and non-pharmacological management modalities for mental health conditions met in general practice.
3. Discuss cultural competence and gain basic skills in providing culturally aware health care.
4. Identify the importance of providing accurate and consumer friendly education materials to patients and their carers.
5. Discuss the benefits of HealthPathways guidelines for assessing, managing and referring patients to local services.
