

ePrescribing in Best Practice Modifying eScripts

Cancelling eScripts

Electronic prescriptions can be cancelled or resent if required. Both of these actions can be done from the Past Prescriptions Tab in a patient record. To cancel an eScript:

1. Navigate to the past prescriptions tab of the patient's record and find the prescription in question
2. Right click on the script and select the option to cancel eScript

Script date	Script item	Dose	Doctor

16/04/2020	Ozmep 20mg Tablet	1 Daily	Dr F. Findacure

3. The eScript will be removed from the prescription exchange service, meaning it cannot be dispensed

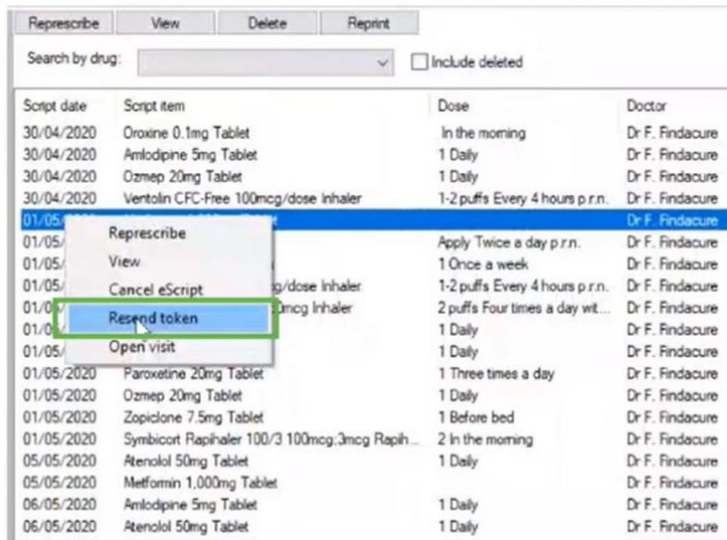

Note: The cancellation must be performed by the original prescriber

Note: The patient will not receive a notification that the tokens been cancelled but see a message informing them of the script has been cancelled when clicking on the link

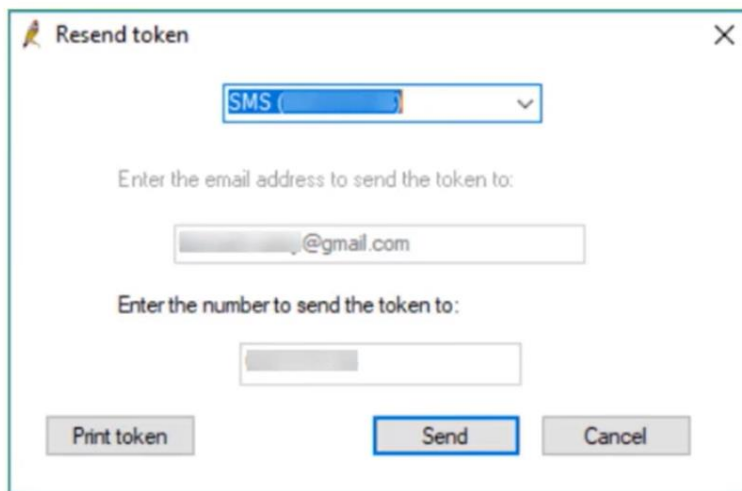

Resending an eScript

eScripts can be resent to a patient, for example if required due to the original token being deleted. To resend an eScript:

1. Navigate to the past prescriptions tab in the patient record
2. Right click the script and select Resend token

3. If required you can change the delivery method of the token by entering an alternative mobile phone number or email, or you can print a paper copy of the token

4. Click send to reissue the eScript via the chosen delivery mechanism

Note: Resending an eScript will automatically cancel the original issue, meaning that the prescription cannot be dispensed twice
