

Primary Sense for Clinicians

Presented by WA Primary Health Alliance

Primary Sense is an easy-to-use clinical decision support, population health management and data extraction tool that helps GPs deliver the right care to patients at the right time. It is easy to use with little or no training to get started, and includes the world's leading population health analytic software, real-time medication safety alerts and patient care prompts. Primary Sense was designed by GP's for GPs in conjunction with data experts and researchers. WAPHA invites Practice Principals, Practice Managers and Practice decision makers to this interactive webinar for the opportunity to learn more about Primary Sense and how it could benefit the clinicians at your practice.
