Managing pain: a team approach

Learning objectives:

- Create a communication strategy that promotes patient self-efficacy.
- Describe chronic pain and management principles to engage the patient in active self-management.
- Construct a comprehensive chronic pain management plan which includes allied health and multidisciplinary care.
- Evaluate the role and limitations of opioids in chronic pain and understand how to taper opioids.
- Use course materials and specialist information to identify effective referral pathways and options to ensure continuity of patient care.
