

WEBINAR

SYPHILIS AND OTHER INFECTIOUS DISEASES OF PUBLIC HEALTH SIGNIFICANCE.

GPs are at the forefront of diagnosing and managing many infectious diseases. In so doing, they also play a pivotal role in public health management.

WA Primary Health Alliance is pleased to host this webinar about the current syphilis outbreak and other infectious diseases, featuring Dr Suzanne McEvoy and Dr Grace Phua.

The current syphilis outbreak in WA has resulted in changes to recommendations for clinical practice. The resumption of international travel coupled with post-pandemic reductions in vaccination rates make the community more vulnerable to outbreaks of diseases such as measles, mumps and pertussis.

Post-exposure prophylaxis for rabies is urgent, therefore clinicians should be aware of processes toward initiating management.

This webinar will address these diseases, covering clinical presentation, up to date testing protocols, management and contact tracing.

 **Monday 19 February 2024**

 **6pm - 7pm (AWST)**
