

Primary Sense

Reports for Influenza Vaccination

Primary Sense can provide reports based on real-time data, allowing practices to monitor performance and focus on clinical outcomes. The features and functionality of reports can support roles across the practice team. Generated reports are automatically saved to a folder on the computer, enabling data comparison over time.

Accessing reports for Influenza Vaccination

At the top of the Primary Sense sidebar menu: click **Reports** and select keyword filter: **Fluvax**

Quick tip!
Use these reports to ensure that your practice's vulnerable patients are prioritised.

 <p>Patients booked in with missing PIP QI measures With appointments in the next 2 weeks</p>	<ul style="list-style-type: none"> Identify patients with particular risk factors (including patients over 65, living with diabetes, or living with COPD) who have not received an influenza vaccine at the practice within 15 months and have an existing appointment to target for opportunistic conversation and action or booking of appointment. Check the Australian Immunisation Register (AIR) if vaccination has been done elsewhere. Filter within the report to identify patients with data entry such as 'over 65' under 'FluVax due reason(s)' and use search function to find an existing appointment date or GP name.
 <p>Patients missing PIP QI or accreditation Measures All patients missing measures</p>	<ul style="list-style-type: none"> Identify patients with particular risk factors (including patients over 65, living with diabetes, or living with COPD) who have not received an influenza vaccine at the practice within 15 months to action for recall. Use the report in conjunction with the Australian Immunisation Register (AIR) to determine if data within the practice software is up to date. Filter within the report to identify patients with data entry such as 'over 65' under 'FluVax due reason(s)' and use search to find a specific GP name or age to target in specific age groups.
 <p>Winter Wellness High risk patients at risk of seasonal respiratory infe</p>	<ul style="list-style-type: none"> Vulnerable patients 5-59 years or Aboriginal and Torres Strait Islander patients 5-59 years who may be eligible for seasonal vaccinations. Use the report in conjunction with the Australian Immunisation Register (AIR) to determine if data within the practice software is up to date. Filter by existing appointment to highlight patients coming to the practice for an opportunistic conversation and/or action on seasonal vaccinations and their risk.

User Guide

V1 / May 2023

 Pregnant and Vaccinations Due influenza and/or pertussis	<ul style="list-style-type: none"> • Identify women marked as pregnant in your software who have no record of an influenza vaccination during this pregnancy. • Check the Australian Immunisation Register (AIR) if vaccinations have been done elsewhere.
 Chronic Lung Disease and Asthma Associated modifiable risk factors	<ul style="list-style-type: none"> • Identify patients with specific conditions such as asthma or combinations of conditions as listed in diagnosis to filter specific target groups for influenza. • Identify patients under the age of 65 who have chronic diseases that may qualify them as a priority group to target for influenza. • Use the report in conjunction with the Australian Immunisation Register (AIR) to determine if data within the practice software is up to date.
 PIP QI report - 10 measures % compliance	<ul style="list-style-type: none"> • View as a % <ul style="list-style-type: none"> ○ Patients 65 years and older who have been immunised against influenza in the previous 15 months. ○ Patients living with diabetes who have been immunised against influenza in the previous 15 months. ○ Patients living with COPD who have been immunised against influenza in the previous 15 months.
<p>For further interrogation of data to target specific areas otherwise not highlighted, reports can be exported to Excel or CSV for enhanced manipulation and filtering.</p>	

Quality improvement (QI) opportunities

<ul style="list-style-type: none"> • Develop a process for recalling a cohort of patients that may be at increased risk of influenza for a seasonal influenza vaccination.
<ul style="list-style-type: none"> • Implement an activity to increase % of patients 65 years and older who are immunised against influenza (or other vulnerable patient cohorts, e.g., Aboriginal and Torres Strait Islander patients 5-59 years, or patients living with diabetes).
<ul style="list-style-type: none"> • Implement an activity to increase % of pregnant patients who are immunised against influenza.
<p>For more information about QI, refer to the QI Tool Kit that is designed to help general practice teams undertake QI activities by providing a range of useful information, resources, tools and templates.</p>

Further information
