

Components of Primary Sense

DATA EXTRACTOR

The extractor is installed on the server of the practice

DESKTOP APP

For generating reports and managing alerts

DATABASE

Used for storing, maintaining and accessing data. It is located in Azure Cloud

THE JOHNS HOPKINS UNIVERSITY ACG® SYSTEM

The world's leading population health analytics software – identifies high risk groups and predicts future health needs to improve patient's care plan

Primary Sense is a population management, clinical decision support and data extraction tool. It makes it easier for GPs to provide patients with the right care at the right time and gives Primary Health Networks (PHNs) a greater understanding of current and trending population health needs.
