Preventative Health Forums

Strengthening immunisation and cancer screening in general practice

WA Primary Health Alliance invites practice nurses in Perth South and Perth East to attend our Preventative Health Forums.

These face-to-face events will provide information about the National Immunisation Program (NIP), vaccine safety and administration, and the national cancer screening programs.

The forums will cover the following topics:

- Key vaccine information, including why and when they should be administered.
- Cultural safety during immunisation appointments.
- Cold chain management processes, from receiving a vaccine in the practice to administering and recording in the Australian Immunisation Register (AIR).
- The Western Australian Vaccine Safety Surveillance (WAVSS) System – what and where to report.
- The four national cancer screening programs – breast, bowel, cervical and lung.
- The National Cancer Screening Register (NCSR) and how integrating it into eligible software can assist clinicians.
