

WAPHA LEARNING WEBINAR

Immunisation - Winter Wellness Webinar

Winter 2025 was one of the toughest for WA's health system and targeted immunisations for at-risk populations can help everyone in the community to stay well and out of hospital.

In addition to expanding the funded RSV immunisation program to include people residing in residential aged care homes, an intranasal influenza vaccine for children and new COVID-19 vaccine targeting a new variant has been added to the National and WA immunisation schedules.

In recognition of the crucial role of GPs and vaccine providers in ordering, administering, educating patients, and ensuring vaccine coverage for all ages, WA Primary Health Alliance invites you to join Professor Paul Effler and Professor Chris Blyth as we discuss the following topics:

- The implementation strategies for the 2026 influenza program.
- The eligibility criteria for older adults, pregnant women and infants in the 2026 RSV program.
- The distribution process and availability of the immunisations.
- The new COVID-19 vaccine ATAGI guidelines.

DETAILS

 Tuesday 14 April

 7pm to 8pm (AWST)

 Webinar

 For general practice clinical and non-clinical staff members
